Fall-Pac

FALL PROTECTION SYSTEMS

FALL-PAC: CREATING SAFER ENVIRONMENTS

POLYSTYRENE AND AIR POCKET FILLED FALL ARREST SYSTEMS

- DESIGNED & MANUFACTURED IN UK
- SCIENTIFICALLY DEVELOPED & TESTED IN-HOUSE
- FAST NATIONWIDE DELIVERY

THE SAFEST FALL ARREST SYSTEMS ON THE MARKET

Fall-Pac has been protecting those working at height since 2004, with fall arrest systems that we believe are the safest available.

Our team is passionate about safety, with unmatched knowledge in fall arrest. Our polystyrene and air pocket systems have been continually designed and developed, with every component scientifically researched and rigorously tested to ensure our products can withstand the toughest of working environments.

Easy installation, fast despatch and helpful, practical advice from our team makes Fall-Pac the trusted fall arrest system of choice for some of the biggest names in industry.

- Scientifically researched & highly developed solutions
- Products fully recycled by Fall-Pac after use
- Monthly in-house testing & published test data
- On-site training & inspections
- Tailored solutions for specific industry needs
- Despatched quickly from North West and South East plants
- Inter-site transport management

FALL-PAC SUPPORTS SECTORS INCLUDING:

- Construction
- Utilities
- Transportation
- Marine & Yachting
- Port Authorities
- Civil Engineering
- Film & TV Production
- Aviation

IN-HOUSE TESTING

Our commitment to product development and safety is unmatched.

Monthly, in-house testing to PAS 59:2014 standards is carried out by our team using our own drop-test facilities at our Wigan head office.

This unique and rigorous testing ensures the safety, integrity and quality of our products, delivering an exceptional, reliable and consistent fall arrest solution.

Monthly test data can be viewed on our website at www.fall-pac.com

"Fall-pac impressed me on multiple levels. I will recommend you to my colleagues. I would like to personally thank you for your outstanding product."

- Mark Alder, Wigan

POLYSTYRENE FILLED FALL ARREST SYSTEM

Designed, developed and tested since 2004, our versatile polystyrene system is proven protection for you and your teams.

Researched, scientifically developed and patented by our own team since 2004, each fall arrest bag contains 60,000 polystyrene chips to produce a robust product that's larger than others on the market, meaning our customers need fewer bags to cover the same area.

Polystyrene fall arrest bags from Fall-Pac will provide protection for anyone working at heights up to 2.7 metres. An additional second layer of units protects those working at heights of up to 5 metres.

FALL-PAC TESTING AND SAFETY STANDARDS

Fall-Pac products are manufactured in the UK using the highest-quality components to a design and specification backed by fall-arrest science.

All Fall-Pac products are fire-retardant, tested to BS5852 0+1, with both our casings and inner polystyrene fill treated in-house to meet strict safety standards, including fire safety standards for construction sites.

FAST INSTALLATION AND EASY POSITIONING

Each portable unit weighs just 6 kg, making the system easy to transport and position on-site, particularly where space is at a premium. Our simple, one-click interlocking system, using mortar-resistant clips treated to withstand severe temperatures, means units can be installed in a matter of minutes.

On-site training and inspections by our team will keep your fall arrest bags maintained and safe for use. When the system is no longer required, Fall-Pac will recycle the product for free.

POLYSTYRENE SYSTEM FEATURES:

- Conform to latest BSI PAS59:2014 requirements
- Constructed from high-quality woven polypropylene casing
- UV inhibitors keep the product stronger for longer
- Coated to reduce risk of water ingress
- Specially-manufactured and modified polystyrene
- 2.5 m long x 0.644m diameter, larger than competing products
- Consistent safety levels through monitored manufacturing processes
- Fully recyclable after use
- 5 years' on-site lifespan when correctly stored and maintained
- Bespoke products tailored for specific industry needs

Fall-Pac™

NEW! AIR POCKET FALL ARREST SYSTEM

Fall-Pac's air pocket filled units offer a new, cost-effective and reliable solution to fall protection.

Researched and scientifically developed to a unique specification by our own team, each fall arrest bag contains a specific quantity of air pockets to produce a robust product that's larger than others on the market.

Air pocket fall arrest bags from Fall-Pac will provide protection for anyone working at heights up to 2.7 metres. An additional second layer of units protects those working at heights of **up to 3.4 metres**.

AIR POCKETS FOR A FALL ARREST SOLUTION YOU CAN RELY ON

Our air pocket fall arrest system delivers consistent and reliable safety. It is not an inflatable product; bags are supplied ready-filled, controlling the number of air pockets inserted into the casing and ensuring that every Fall-Pac air pocket system carries the same level of fall arrest protection.

Site operators do not carry the responsibility of inflating the product to the correct pressure level, ensuring that the product remains correctly inflated and monitoring the products to ensure the system still meets safety requirements. Fall-Pac's air pocket system presents a **far lower risk**.

FALL-PAC TESTING AND SAFETY STANDARDS

Our air pocket system has been launched following rigorous testing to ensure that it meets our high quality standards. The system meets all the same safety and testing standards as our polystyrene system, delivering a consistent approach to fall arrest.

FAST INSTALLATION AND ON-SITE MAINTENANCE

Each portable unit is light, for easy transportation and positioning. Our simple, one-click interlocking system, using mortar-resistant clips treated to withstand severe temperatures, means units can be installed in a matter of minutes.

On-site **training** and **inspections** by our team will keep your fall arrest bags maintained and safe for use, with Fall-Pac vehicles able to refill bags on-site for extra convenience, and we'll recycle the product at end of use.

AIR POCKET SYSTEM FEATURES:

- Conform to latest BSI PAS59:2014 requirements
- Constructed from high-quality woven polypropylene casing
- UV inhibitors keep the product stronger for longer
- Coated to reduce risk of water ingress
- Specially-designed air pockets, with stronger seals to prevent air loss
- 2.5 m long x 0.644m diameter, larger than competing products
- Consistent safety levels through monitored manufacturing processes
- Fully recyclable after use
- 5 years' on-site lifespan when correctly stored and maintained
- Bespoke products tailored for specific industry needs

TRANSPORT SAFETY FALL ARREST SOLUTIONS

Fall-Pac's 'TS1' unit is the most compact product in our lorry and transportation range, specifically designed for use in the cargo and transportation sectors.

The TS1 design, weighing approximately 20kg, delivers added protection for personnel and its robust, one-click interlocking clip system allows for complete flexibility, meaning modules can be added, repositioned or taken away in a matter of minutes.

WORKING AT GREATER HEIGHT?

Our 'TS2' units have been developed for those working at greater heights in the transportation industry.

TS2 units, weighing 40kg and utilising the same easy-to-use clip system as the TS1 units, are ideal for use around trailers, adding an extra 2.5m footage space to either side and the rear and considerably reducing the risk of injury from falls.

TS1 UNIT FEATURES	TS2 UNIT FEATURES
<ul style="list-style-type: none">• Offers fall protection of up to 2.7 metres• In-house monthly drop-testing ensures consistency• UV inhibitors keep the product stronger for longer• Ideal for use with dock levellers and open trailers• Dimensions: 2.5m x 1.8m x 0.644m	<ul style="list-style-type: none">• Offers fall protection of up to 3.44 metres• In-house monthly drop-testing ensures consistency• UV inhibitors keep the product stronger for longer• Ideal for use with dock levellers and open trailers• Dimensions: 2.5m x 1.8m x 1.2m

NEED TO MOVE YOUR FALL-PAC UNITS AROUND SITE?

Our stillages ensure that you get the maximum performance and ease of use from your Fall-Pac units. Bespoke stillages have been designed to store and transport Fall-Pac units, ensuring the solution fits our products' exact dimensions.

Each stackable stillage can store and transport 20 Fall-Pac units, with demountable legs and fork lift guides providing the perfect storage and transport solution.
